

# Icy pole stick tower box

## The workbench

### Stage one (the box)

- Colored icy pole sticks
- Square piece of wood (14cm width by 14cm length)
- Wood work glue
- Paint brush

### Stage two (the lid)

- 5cm foam ball
- Square piece of wood (11cm width by 11cm length)
- Balloon
- Poster paint (non toxic)
- Drill
- Glitter

### Step 1.

Glue icy pole sticks onto the large wooden base in a square shape, until you have the desired height (refer to the picture) and set aside to dry.

### Step 2.

Get mum or dad to drill a hole through the center of the wooden lid large enough to squeeze a balloon through then paint it using different colored paint, while wet apply some glitter to decorate.

### Step 3.

Push the foam ball inside the balloon then push the end of the balloon through the drilled hole in the lid using a pen to push it through; tie the end of the balloon into several knots, securing it tightly so it does not pull back through the hole. Fill up the tower box with your favorite things.
