

# Christmas Angel

Required materials:

Glitter

Bell shape and small ball made from Styrofoam.

Coloured match sticks

Glitter pipe cleaner

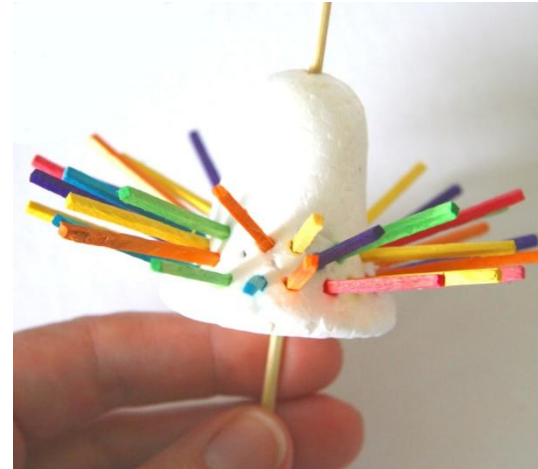

Poster paint

Joggle eyes

String

It is probably easier to paint your Styrofoam materials first, but for this guide it was done later, its your choice., I would do it before adding match sticks.

Using the kebab stick push a hole from the bell base through to the top centre so that it protrudes out of the top.

Push a hole using the kebab stick into the ball going only half way through the ball. Push a glitter pipe cleaner through the bell and into the ball, securing the head on.

Using your kebab stick again push two holes into the bell one above the other on both sides (see image above)

If you have not already painted, paint your body now and whilst wet still sprinkle on some glitter, if you have painted add some glue (not craft glue – it dissolves Styrofoam) pva glue is best and sprinkle glitter). Add a hole to the top of the head and add a halo, glue on joggle eyes.

Add some decorative string to hang and add a decorative centre around the neck area to finish. Add a nose and mouth if you wish.
